

Filling the gap and soft-tissue management **without** harvesting pain and anxiety. How?

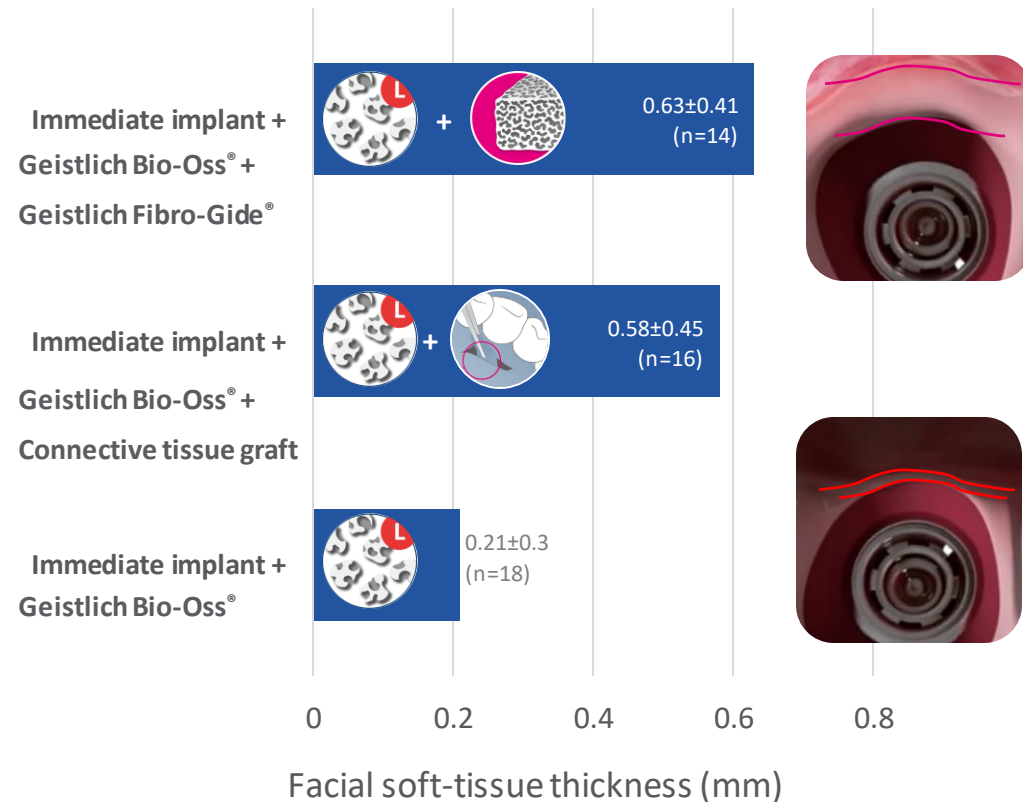

Geistlich products used

Science Bits
2022/Q1

Significantly more soft-tissue thickness in patients who underwent tissue grafting along with immediate implant placement.

✓ Difference between Geistlich Fibro-Gide® and CTG was insignificant.

Study results

After immediate implant placement and filling the gap with Geistlich Bio-Oss®, soft tissue is augmented using CTG, Geistlich Fibro-Gide®, or not grafted:

- Uneventful healing at all sites, and 100% implant survival rate.
- Significantly **less buccal marginal level remodeling** in patients who underwent soft-tissue grafting.
- Less anxiety and pain when augmentation is performed with Geistlich Fibro-Gide®.
